

High-Proof Denatured Alcohol

For 47 years, Didion has been procuring, milling, fermenting, distilling and transporting top-quality agricultural products. With the increased demand of higher quality alcohol for the hand sanitizer market, we have modified our ethanol facility to manufacture 190 proof, 200 proof alcohol, and our SDA-40B alcohol (ready on 11/15/2020 or sooner). All alcohol products are compliant with the Food & Drug Administration's temporary policies during the pandemic. Didion also produces a finished, liquid hand sanitizer product that meets World Health Organization standards.

PROPRIETARY PURIFICATION PROCESS

Made from locally grown Wisconsin corn, our high-proof alcohol is produced in a completely separated system from our fuel-grade system. We have taken additional steps, beyond typical ethanol refinement to clarify our product, and reduce odor and other impurities.

OUR GUARANTEE

- Product is always produced to meet your specific needs
- Ability to denature with multiple denaturants
- Systems in place to remove fuel-grade cogener profiles
- A separate system for loading our superior 40B alcohol
- Delivery in bulk formats including rail cars (28,000 gallons), tankers (6,800 gallons), totes (265 gallons), and drums (55 gallons).
